Before the next challenge.

My name

Paul Duarte

A question I want to resolve

What is the best way to remember all of this?

Recall. Question. Recalibrate.

What have I completed?

I did the console of this project on visual studio with C#.

My explanation of classes, objects, data and actions

C# My explanation of classes is that they are like the blueprints of any project.

My questions, answers and remaining uncertainty

My question is how important it is to be on a team. My answer is that it is really important.

My personal GitHub repository URL

https://github.com/jonathan0611p/Week-10B

Readiness check

Yes.

Replace Chapters with Pipelines

Attention First, Chapter 3, pp. 37–41 (132-page edition).

What I understand from this chapter

The idea of what this chapter is trying to say is don't stop yourself from being better on something just cause there are stopping points called chapters instead you need to have a mindset of keep on going

like a pipeline.

My opinion and reasons

I do agree if I am doing really well on something and am done with something I completely stop doing it since I did enough. I could work on it more but I stop since what I need to do could be done later.

A decision I can apply

I can apply the storytelling pipeline where I can become better. A lot of times I do something I forget the little details and with the things I need to do.

A question or next investigation

My question is how do I keep up my momentum from stopping.

Design for the Attention Economy

Attention First, Chapter 6, pp. 53–58 (132-page edition).

What I understand from this chapter

This chapter is about attention spans and how in this modern day we are constantly trying to

find a high kind of where we are trying to find the best show or music or anything and whatever isn't we drop and try to find something else.

My opinion and reasons

My opinion is that attention is going in a bad place as humans. To try and find something that will make are brains

A decision I can apply

A leak I have is overloaded interface sometimes I forget to put in a requirement because I am not sure what to put.

A question or next investigation

An answer of how I don't forget a requirement is asking my team members what I need to put in

Identity and the Creator Loop

Attention First, Chapter 7, pp. 61–69 (132-page edition).

What I understand from this chapter

Identity is shown through repeated actions, habits, and the standards we choose to follow

My opinion and reasons

I think consistency matters more than being perfect because improvement comes from practice and effort, showing that you care to actually learn and improve.

A decision I can apply

I will test my work, fix mistakes, and keep my project organized

A question or next investigation

How can I stay consistent and keep improving even when a project gets difficult?

Designing Your Teams and Tools

Attention First, Chapter 8, pp. 71–74 (132-page edition).

What I understand from this chapter

What I understand from this chapter is that teams and tools are more complex than you think. It can make you think differently like what can I use to help me make something.

My opinion and reasons

I do agree with that are more too tools than what people actually think they are

A decision I can apply

I can apply that we are not special. What we build can be. Because to me I overthink to much I think am already supposed to know this or that but actually I can I don't have to think like this instead I can work and grow with it.

A question or next investigation

A question I have how can I apply this to not only my work but also my day to day life.

The Human Operating System

Attention First, Chapter 11, pp. 93–103 (132-page edition).

What I understand from this chapter

What I understand is that humans mean to us how we grow in this future we are in like ai or new practices new costumes in the future and how we adapt in it.

My opinion and reasons

My opinion is that once you evolve to today's future you can do anything.

A decision I can apply

A way I can apply this is to ask more questions in order to fully understand what is being said.

A question or next investigation

How do I adapt fully to accepting this is how things are going to be.

Bring something to the summit.

The connection across the readings

I bring consistency to my work and my teamwork.

Evidence I am ready to show

I am ready to bring evidence of working on visual studio and using C#.

My board in words

Experience: visual studio and C#.

Book insight: gaining my ability to put my full attention to my work.

Evidence: screenshots and code.

Choose where you want to go.

My direction

Join a lead

The mission I want to explore

I want to expand my knowledge on how to make a world. I would like to visualize more and also use logic.

My pitch

My pitch is to bring more logic to our group and I would like to visualize more and I feel like I ask a lot of questions instead of thinking visually of what I need . I feel like I have logic over creativity.

Conversations and decisions

I spoke to my leader Johnathan on what I want to do and add.

Agree on the work.

Team name / solo mission

"Hello World"

Agreed lead / my name if solo

Jonathan

Accepted members and contributions

Paul Duarte brings in good vibes and makes the team stay on task.
Ai help with little mistakes
Mio she bring creativity
Jonathan bring leadership
Isaias is a good problem solver very good at coding

How the literature strengthens this team

Jonathan brought the team to work together getting our attention back on track. Mio kept working, not stopping at the chapters and adding more stuff like music to something even though we didn't need it.

Communication and check-in plan

We compare with each other while we work, working as a full team as if this was a job.

Team GitHub URL, or Working solo

https://github.com/miomio08/11B---Hello-World

Make the Attention Accord.

Purpose and smallest playable result

Game: Sharksweeper

Goal: Find all safe spaces without clocking a shark

Condition: Check whether the tile contains a shark

Visible consequence: A safe tile reveals a number

My attention promise

Try to focus making the game look better

Time and dependency plan

We need to add the sharks and tiles are clickable

Board explanation and contributors

Using the Godot game engine and C#

Translate the mission into code.

My story-to-code map

Object: A tile on game board

Data: Whether it contains a shark and how many nearby mines there are

Action: It shows the tile when clicked

System event: when clicked there is a reaction

What I am borrowing and why

I am borrowing different Ai for help also Godot engine Sprite 2D

Object lifetime and responsibility

Work on the console and the the title screen

Make one moment playable.

What I expect to happen

I expect it to work and nothing goes wrong.

What I built and where it lives

engine: Godot 4.7.2 .NET / C#
character: CharacterBody3D
movement: Keyboard controls using Godot's Input Map.
interaction: Press E near a beacon.

visible consequence: The beacon changes color
scene: A new scene in your Godot project.

A difficulty and my response

I had a hard time saving the work in Godot, but I just realized I need to make a folder in Godot and some errors from starting it.

Test what you are claiming.

My test record

I believe I completed it.

My improvement experiment

Asking ai what was wrong and fixing the mistake.

Promised versus returned evidence

I got the results I wanted.

Return with work you can explain.

My final access and file check

Godot and C# and visual studio.

My next decision

I will work with my team on what we need to do.

Handoff

Commit and push your own project, notes, report, boards and tests. Verify file/image/link access. Include your team GitHub link if teamed. Submit one personal GitHub URL in your own Canvas record.
